Examiner's Amendment

1. An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Mr. Thomas Berthold on April 20, 2006.

The application has been amended as follows:

- Claim 15, line 12: the word "substantially" was deleted;
- Claim 23, line 3: the phrase "no Pt" was replaced with the phrase "less than 10 atomic % Pt";
- Claim 28, line 6: after "structure", the following phrase was inserted:
"comprising an identical upper ferromagnetic layer";
 - Claim 28, line 18: the phrase "substantially equal to Mrt(UL) of said AFC reference recording layer" was deleted;
 - Claim 28, line 21: the phrase "the sum of Mrt(LL1) and Mrt(LL2) is greater than Mrt(SLL-Max) was replaced with the following phrase:
"each of said first and second lower ferromagnetic layers has a Mrt value up to Mrt(SLL-Max)"; and
- Claim 29, line 3: the phrase "no Pt" was replaced with the phrase "less than 10 atomic % Pt".

Reasons for Allowance

3. The present claims are deemed allowable over the reference US '498 A1 since the reference is commonly assigned and a terminal disclaimer has been filed to obviate the obviousness-type double patenting rejection.

4. The present claims are deemed allowable over the references of record since the references of record fail to disclose or render obvious a magnetic recording disk comprising a AFC recording layer meeting both the claimed relative Mrt values and intrinsic coercivity values.

While the prior art of record disclose magnetic recording media possessing AFC recording layer structures with 3+ magnetic layers, the prior art of record fail to teach or render obvious embodiments wherein the first lower, second lower and upper magnetization directions meet the claimed limitations in each remanent state while also meeting the claimed Mrt and intrinsic coercivity limitations. The Examiner agrees with applicants' arguments that Honda et al. teach away from the claimed invention since, as noted by applicants, Honda et al. teach that the substitution of a single layer with multiple ferromagnetically coupled layers results in higher coercivity while the claimed invention requires the ferromagnetically coupled layers to possess an intrinsic coercivity less than that of the upper ferromagnetic layer. The Examiner also notes that Mrt and intrinsic coercivity are not inherent to generic magnetic layers since both Mrt and intrinsic coercivity values are easily manipulated by changing processing parameters such as deposition conditions, underlayers, layer thickness values and elemental composition.

Art Unit: 1773

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
